

Thesis Framing and structuring

Teija Aarnio Development manager, D.Sc. (Tech.), M.Sc.

2023

Thesis Process

Stage 1. Planning

- Introduction: The topic of the work (problem or need) and a compact introduction of the target organisation.
- Objectives: The expected results for the organisation.
- Research questions: Which questions does the thesis answer?
- Theoretical framework: What are the previous research, theories, concepts, literature and other possible material that are essential for the work?
- Methodology: Data and tools which are used in the research and development.
- Organisation: The business unit, function or project in the organisation which is the focus of the student's research and development (in case the thesis is commissioned by an organisation).
- · Schedule: Phasing and scheduling the tasks.
- Risk assessment: Anticipation and preparedness for problem situations.

Stage 2. Implementation

- Familiarization with the literature on the topic of the thesis.
- Design and implementation of a research and development project.
- Writing a thesis according to Haaga-Helia's reporting instructions.

Stage 3. Finalising

- Presentation of the thesis in a way to be agreed with the supervisor
- Writing of maturity exam
- Thesis plagiarism review
- Publishing the thesis

Thesis Framing and Structuring

Stage 1. Planning

- Introduction: (1) The topic of the work (problem or need) and a compact introduction of the target organisation.
- (2) <u>Objectives</u>: The expected results for the organisation.
- (3) Research questions: Which questions does the thesis answer?
- (4) <u>Theoretical framework</u>: What are the previous research, theories, concepts, literature and other possible material that are essential for the work?
- Methodology: Data and tools which are used in the research and development.
- Organisation: The business unit, function or project in the organisation which is the focus of the student's research and development (in case the thesis is commissioned by an organisation).
- · Schedule: Phasing and scheduling the tasks.
- Risk assessment: Anticipation and preparedness for problem situations.

1. Select a topic

- Topic i.e. problem or need

- Narrow down the theme by asking "From what perspective does the target organization or research project want to address the topic?"
- Narrowing down the theme helps to keep the content narrow enough.
- Use three questions to narrow down the topic. Write open questions related to the topic (how, what, what kind of, ...) and choose the three most appropriate ones.

THEME: Responsible travelling

Scope 1. What perspective on travel? Solid waste

Scope 2. When is the waste generated? During a trip

Scope 3. How to travel? *Along the country*

TARGET ORGANISATION:

Shipping company operating between Helsinki and Porvoo

TOPIC:

Generation of solid waste when travelling across the country

2. Set objectives

- The expected results for the organisation.

- Attach the topic to the target organization or research project by answering the question "What are the objectives for the target organization or research project?"
- Use three questions to narrow down the topic. Write related open-ended questions (how, what, what kind of, ...) and choose the three most appropriate ones.

TOPIC:

Generation of solid waste when travelling across the country

TARGET ORGANISATION: Shipping company operating between Helsinki and Porvoo Scope 1. How to travel? By ship, bicycle, bus

Scope 2. Where to travel? From Helsinki to Porvoo

Scope 3. Who is travelling? One passenger

OBJECTIVES:

To determine the amount of solid waste per passenger when traveling in three different ways from Helsinki to Porvoo

3. Define research questions

- Which questions does the thesis answer?

- Attach the topic to the target organization or research project by answering the question "What are the results of the work for the target organization or research project?"
- Use more questions to narrow down the topic. Write open-ended questions related to the topic (how, what, what kind of, ...) and choose from one to three the most appropriate research questions.

THEME: Responsible travelling

TOPIC:

Generation of solid waste when travelling across the country

TARGET
ORGANISATION:
Shipping company
operating between
Helsinki and Porvoo

OBJECTIVES:

To determine the amount of solid waste per passenger when traveling in three different ways from Helsinki to Porvoo

SCOPES:

Scope 1. How to travel?

By ship, bicycle, bus
Scope 2. Where to travel?

From Helsinki to Porvoo
Scope 3. Who is
travelling? One passenger

RESEARCH QUESTION: How much solid waste is

generated when one person travels from Helsinki to Porvoo in different vehicles? The target organization can use the information to assess the responsibility of its own operations.

4. Look for a theoretical framework

- The theoretical framework answers the question of what are the previous research, theories, concepts, literature and other possible material that are important for the work.
- The subject and the subject help in the search for theoretical reference development.

THEME: Responsible travelling

TOPIC:

Generation of solid waste when travelling across the country

TARGET ORGANISATION: Shipping company operating between Helsinki and Porvoo

OBJECTIVES:

To determine the amount of solid waste per passenger when traveling in three different ways from Helsinki to Porvoo

RESEARCH QUESTION:
How much solid <u>waste</u> is generated when one person travels from Helsinki to Porvoo in different vehicles?

Waste = term (rule of thumb one word)

Responsible travel = concept (rule of thumb at least two words)

The concepts help to find a theoretical framework (for example, Sustainable Traveling Standards).
